

AMENDMENTS TO THE SPECIFICATION

Please amend the specification as indicated hereafter. It is believed that the following amendments and additions add no new matter to the present application.

In the Specification: [Use ~~striketrough~~ for deleted matter (or double square brackets "[[]]" if the striketrough is not easily perceivable, *i.e.*, "4" or a punctuation mark) and underlined for added matter.]

Please amend the paragraph starting on p. 2, line 9 as follows:

In general, in the present invention, a set of cameras is managed automatically such that each of a plurality of subjects or items of interest can have a unique remote access point (as opposed to the access point being unique to a specific camera as might be the case in the prior art). Multiple subjects or items of interest can be tracked by the system of the present invention, 4even if they appear in the images being captured by the same eamer(s) camera(s). It will be appreciated that the cameras need not be part of the system itself, but may instead comprise environmental cameras deployed for other purposes.
